Designed to be the Ultimate Green and Serene

Plant Tissue Culture is one of the most promising branches of plant science, occupying key positions in plant biotechnology, plant breeding, and plant propagation. Plant tissue culture, by definition, is the application of various techniques for the aseptic culture of plant cells, tissues, organs, and their components under known physical and chemical conditions *in vitro*.

The remarkable success of the applications of plant tissue culture in plant biotechnology and plant science has led it to its significant roles in agriculture, forestry, and horticulture. Several of its applications include large-scale micro-propagation, somatic embryogenesis and synthetic seed technology, genetic engineering of plants by gene transfer technology, and commercial production of plants.

Among the many concerns in plant tissue culture, the sensitivity of its samples to any source of contamination highly influences its success. A single bacterial cell or fungal spore can be fatal to a small plant piece since it can easily contaminate the growth media. It is essential to maintain a sterile environment as much as possible to avoid the contamination of samples, and this can be provided by the use of a laminar flow cabinet.

The Role of Esco in Plant Tissue Culture

Since 1978, Esco has installed tens of thousands of laminar flow cabinets for the global life sciences market, providing reliable protection for samples and work processes of multitude of applications. Esco laminar flow cabinets are the premium selection for the discerning researchers, offering a combination of value, high quality construction, low operating noise levels and a wide product range.

Introducing Airstream® Horizontal Laminar Flow Cabinets, designed specifically for plant tissue culture. It offers a combination of smooth and easily cleanable work zone, easy-to-use features, superior filtration efficiency, and energy-efficient technology as part of Esco's advocacy to produce environment-friendly laboratory equipment. Experience quality protection. Experience innovation.
