

Here are some guidelines on how to properly store chemicals:

Properly label all chemical containers.

Keep all containers properly sealed when not in use.

Store chemicals according to their compatibility and hazard classes.

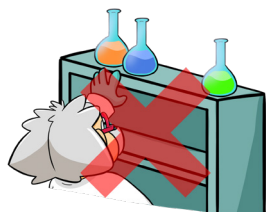

Do not leave or store chemicals in the fume hood.

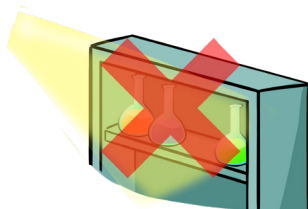

Store large and heavy containers on lower-level shelves.

Do not overcrowd shelves.

Avoid storing chemicals in high places or above shoulder level.

Avoid storing chemicals under direct sunlight or beside heat sources.

Properly dispose of all expired and degraded chemicals.

Store volatile chemicals in ventilated cabinets.

Store flammable substances in approved flammable storage cabinets.

Store corrosive substances in the appropriate secondary containers.
